

Beyond Voice

Benefits of VoxNow

IMPROVE PRODUCTIVITY AND TRANSFORM THE WAY YOU WORK WITH **VoIP TELECOMMUNICATIONS**

VoIP systems promise lower costs and can help drive productivity and revenue, thanks to their inherent power, flexibility, and ease of integration. This is particularly true for companies with substantial telesales operations.

“By the end of 2005, our research forecasts that more than two-thirds of Fortune 2,000 companies will have deployed VoIP either partially or wholly.”
Igal Brightman, Chairman & CEO, Deloitte Brightman Algamor

Today, most phone calls are still carried as analog data on an end-to-end voice network, with a dedicated connection established between the two parties. VoIP takes a different approach, converting analog voice signals into digital data packets that are transported over standard IP data networks - just like e-mail and other data files - then converting them back to analog so they can be understood at the other end.

Internal calls: VoIP's biggest impact on costs is for calls between company sites. They can be made without incurring any fees or tariffs.

External calls: Using VoIP for outside calls can save significantly on long-distance calls.

Flexibility: Relocating a VoIP phone is as simple as plugging it in at the new location.

Mobility: VoIP extends communication to remote employees, telecommuters and remote offices.
